## SmartCheck – Vehicle Defect Checks – Without the Paper!

At **IKI Mobile** we understand how important it is to check the roadworthiness of any vehicle and in particular, passenger carrying vehicles, to ensure the ongoing safety of your drivers and service users.

Of course, these checks must be carried out to statutory guidelines, be complete and accurate, assist repair decisions and ideally improve safety, by indicating the severity of a defect. We know it is possible to achieve this with paper but too often this method is time consuming, prone to inaccuracy, inflexible and one-way, i.e. informative, not interactive.

With **SmartCheck** from **IKI Mobile** running on a PDA or rugged handheld, the defect check becomes all you need it to be: accurate, immediate and interactive. Your driver is informed of the severity of a defect and instructed, according to your own rules to “ground” the vehicle, seek Supervisor advice or continue with the journey.

This is achieved without the cost and inconvenience of paper. It’s electronic, allowing resultant repair instructions to be sent directly to your service department, so repairs are carried out faster and vehicles spend more time in service. You will improve your service, save paper cost, improve your productivity and save money through reduced administration!

**SmartCheck** from **IKI Mobile** combines all of the important factors for effective vehicle inspections:

- ➔ Compliance with legislation and VOSA Roadworthiness policies
- ➔ Logical and thorough coverage for all aspects of the vehicle to be checked
- ➔ Identification and processing of any defects found, including safety warnings and remedial action
- ➔ Accurate and complete records of inspections undertaken including Date, Time and Signature
- ➔ “Traffic Light” Categories to instruct or assist the driver on action to be taken
- ➔ Provision of Defect Summary Reports by Vehicle
- ➔ Data export via Remote Communications to existing fleet management systems

**The beauty of SmartCheck?.....All of the above is achieved without any paper!**

Your preferred fleet management system can continue to provide the defect management that you currently enjoy. **IKI** will enhance this by providing real time defect data.

**SmartCheck** from **IKI Mobile** is designed by you, with your own business rules and with clear and easy to use data entry screens. No fiddly buttons. No tiny screen selections. Our unique “Traffic Light” categories allow clear guidance for the individual conducting the vehicle inspection, showing when a defect needs to be addressed by their Supervisor and ultimately when a vehicle is not permitted to be taken out on the road, thus removing the safety decision from the driver and reducing risk.

**SmartCheck** from **IKI Mobile** will send defect reports remotely without the driver even needing to be aware. No “send now” button. No dial and wait. No redial or retries.

We are mobile solution specialists, with nearly 20 years in the industry and a host of happy customers. You might also be interested in our solutions for **Community Transport, Meals on Wheels, Wireless Ticketing** or **SmartSurvey**, the do-it-yourself mobile solution.
